

## realSection v0.3

Link a material to one or more solids:

1. select one or more solids.
2. right-click the solid(s)
3. select **'Define realSection material'**
4. use from the dropdown list a material that will be used for the realSection

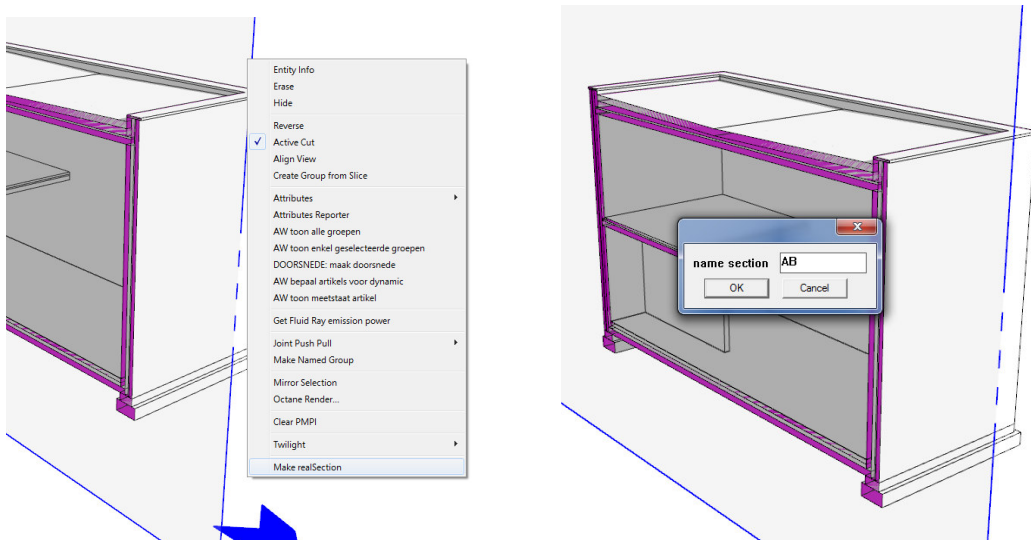

*Note: realSection will use all standard SketchUp materials that starts with '\_'*

Create a new realSection:

1. define in a standard SketchUp sectionplane
2. right-click the sectionplane
3. if the sectionplane isn't already defined as a realSection you can choose the option **'Make realSection'**.
4. choose a name for the realSection
5. the realSection will be calculated and showed

*Note: the realSection is put on a layer with the same name like you named the realSection only starting with '\_'*

Update one realSection:

1. select the sectionplane of the realSection you like to update
2. right-click the sectionplane
3. choose **'Update realSection'**

Update all realSections:

1. select in the Plugins menu the option **'Update all realSections'**

Show a realSection:

1. select the sectionplane of the realSection you like to show
2. right-click the sectionplane
3. choose **'Show realSection'**
